

OVERVIEW

Challenges facing organizations can range from having to comply with legal requirements of pollution prevention and control to setting up environmental management systems to meet the ISO 14001 standard in environmental management. Many organizations also have to deal with specific issues including contaminated land, the climate change levy and packaging regulations. Wider issues also have to be addressed such as sustainable development and corporate social responsibility. Organizations have also started to realize the benefits of effective environmental management in terms of the cost savings that can be made – for example, the savings that can be achieved through effective waste and energy management initiatives. The trend towards integrating environmental practices into everyday management has in many cases created a training need for the specialist and generalist.

WHO SHOULD ATTEND?

Everybody within an organization should have some training on the **ENVIRONMENTAL MANAGEMENT IN ORGANIZATIONS** as all have a responsibility to the environment. Environmental awareness and local environmental issues are critical to be understood by all, from the general worker to the the board of directors.

BENEFITS

To help individuals become more proficient in the way they discharge their environmental responsibilities, and in doing so help to deliver a more sustainable world.

INTRODUCTION

Session One - The State of the Global Environment

- ▶ All things are linked
- ▶ Pollutants within the Earth system
- ▶ Overburdening an interconnected world
- ▶ Trends in water
- ▶ Biodiversity struggling on
- ▶ Shrinking earth, vanishing forests, barren oceans and empty food baskets
- ▶ Caught in the cross-winds
- ▶ The human cost
- ▶ Money makes the world go around
- ▶ Our common destiny

Session Two - Key Environmental Themes

1. Pollution Prevention and Control

- Guiding principles
- The integrated approach
- Regulation
- Complementary approaches
- Environmental outcomes
- Enforcement
- Achievement
- Challenges to industry

2. Biodiversity and Conservation

- What is biodiversity?
- Why does conserving biodiversity matter?
- International legislation and policy
- South African policy and legislation
- Organizations' approaches to biodiversity conservation
- Biodiversity and land use planning
- Delivering biodiversity through community strategies
- Biodiversity and business

3. Climate Change and Energy

- The science of climate change
- The basics of carbon management
- The policy framework
- Emissions trading and renewable energy

Session Three - Managing Environmental Performance

1. The responsibility of Organisations

- Environmental issues from the perspective of the organization
- The impacts of environmental issues on organizations
- Understanding the pressures on organizations
- Taking action

2. Environmental Management Systems

- EMS background
- ISO 14001 – EMS specification
- EMS certification and accreditation
- Eco-management and Audit Structures

ENVIRONMENTAL MANAGEMENT

Session One - Evaluating Environmental Performance: Emissions and Contamination Standards

- ▶ Emissions to atmosphere
- ▶ Emissions to atmosphere – administrative issues
- ▶ Ambient air quality
- ▶ Emissions to land
- ▶ Discharges to water

Session Two - Measurement and Monitoring

- Monitoring strategy and programmes
- Monitoring of air
- Monitoring of water
- Monitoring of land
- Monitoring of nuisance – noise
- Monitoring of nuisance – odour
- Monitoring of nuisance – deposited dust
- Quality assurance and control

Session Three - Auditing in Environmental Management

- Scope and objectives of auditing
- Standards for environmental auditing
- Management systems auditing
- Auditor qualifications
- Links with other business systems

➤ **REPORTING**

Session Four - Evaluation Tools

1. Environmental Impact Assessment

- Introduction
- Background to EIA
- The EIA process
- What is involved in an EIA?
- Links to other environmental management tool

2. Strategic Environmental Assessment

- What is SEA? 200
- Policies, plans and programmes 201
- Applications of SEA 202
- The SEA Directive

3. Environmental Risk Management

- Risk, its assessment and management
- The regulatory context
- The application of risk assessment in regulation
- Tools and techniques for practitioners
- Evaluating risk assessments
- Future trends

4. Life Cycle Assessment

- LCA methodology
- Applications of LCA

A red spiral-bound notebook is shown from a top-down perspective. The spiral binding is at the top, with seven visible loops. The top page is red and features the word "Day" in a white, bold, sans-serif font. The bottom page is white and features the number "3" in a large, bold, black sans-serif font. The notebook is positioned on the left side of the frame, with a dark teal background to its right.
